This document demonstrates how to log on to cs-class.uis.georgetown.edu from a Windows computer using PuTTY.

1. If you do not have the PuTTY software, check the Other Utilities folder within Server Help on the Blackboard site for this class.

2. Once the file putty.exe is on your computer you can run the program (there is no installation process). You may want to move the file to your desktop so it is easier to locate.

3. To run PuTTY simply double-click the file name or the PuTTY icon:

4. Start a new session by entering the server address in the Host Name (or IP address) text box. Specify 22 for the Port and SSH as the Connection Type, then click the Open button that is located in the bottom right portion of the PuTTY Configuration dialog box.
5. Enter your NetID and password when prompted

6. Once you have successfully logged on, you should see a screen like the one below.
