

Supersense and Sensibility

Proxy Tasks for Semantic Annotation of Prepositions

Luke Gessler, Shira Wein, and Nathan Schneider
Georgetown University

Prepositional Supersense

A **coarse-grained label** describing a preposition's **meaning**

- (1) I rented an apartment **in**_{Locus} Boston
- (2) I hope to see you **in**_{Time} the future
- (3) It's gone downhill since a change **in**_{Characteristic} ownership

Annotating prepositional supersenses

- ...is currently **hard** and **expensive**

Annotating prepositional supersenses

- ...is currently **hard** and **expensive**
- SNACS v2.5:
 - 50 supersenses
 - 100-page manual

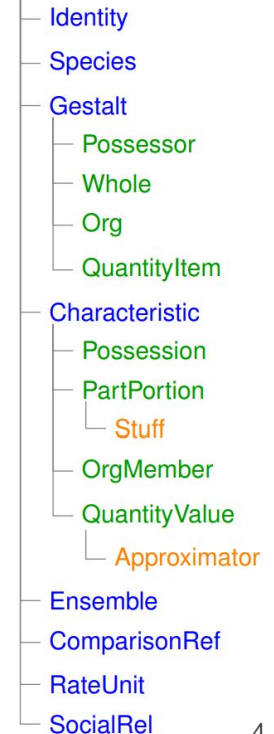

Circumstance

Participant

Configuration

Crowdsourcing prepositional supersenses

- Direct supersense annotation is **too hard** for crowdworkers

He has made a bold boardroom choice **in??** silk twill

Please choose the correct supersense of the preposition "in" as used in the sentence above.

- Circumstance
- Temporal
- Time
- StartTime
- EndTime
- Frequency
- Duration
- Interval
- Locus
- Source
- Goal
- Path
- Direction
- Extent
- Means
- Manner
- Explanation
- Purpose
- Participant
- Causer
- Agent
- Theme
- Topic
- Ancillary
- Stimulus
- Experiencer
- Originator
- Recipient

Crowdsourcing prepositional supersenses

- Direct supersense annotation is **too hard** for crowdworkers
- But: could we have crowdworkers solve a **simpler task**, and **infer** a full supersense label?

He has made a bold boardroom choice **in??** silk twill

Please choose the correct supersense of the preposition "in" as used in the sentence above.

- Circumstance
- Temporal
- Time
- StartTime
- EndTime
- Frequency
- Duration
- Interval
- Locus
- Source
- Goal
- Path
- Direction
- Extent
- Means
- Manner
- Explanation
- Purpose
- Participant
- Causer
- Agent
- Theme
- Topic
- Ancillary
- Stimulus
- Experiencer
- Originator
- Recipient

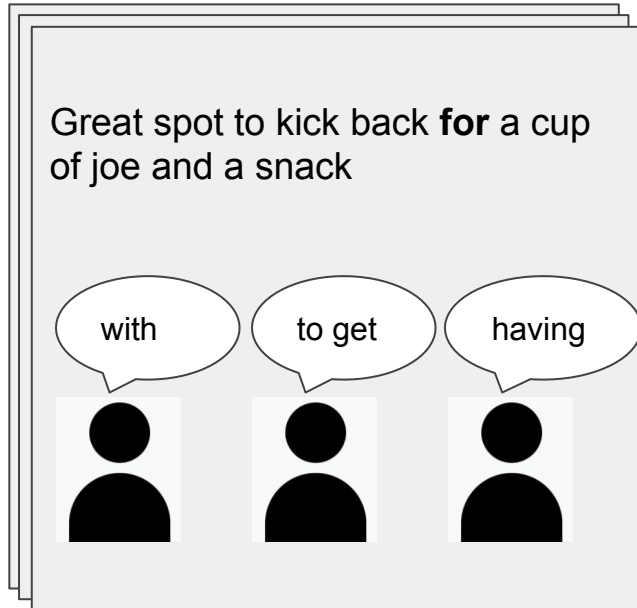

Crowdsourcing prepositional supersenses

- 2 **proxy task** designs
 - Intended for implementation on Amazon Mechanical Turk
 - Amazon MT already explored for crowdsourcing senses for content-words
- 4 pilot studies with a handful (5-7) of graduate student crowdworkers
- Goal: assess whether designs can work under ideal conditions

Design 1: Preposition Substitution

Step 1: crowdworkers **generate** substitute phrases

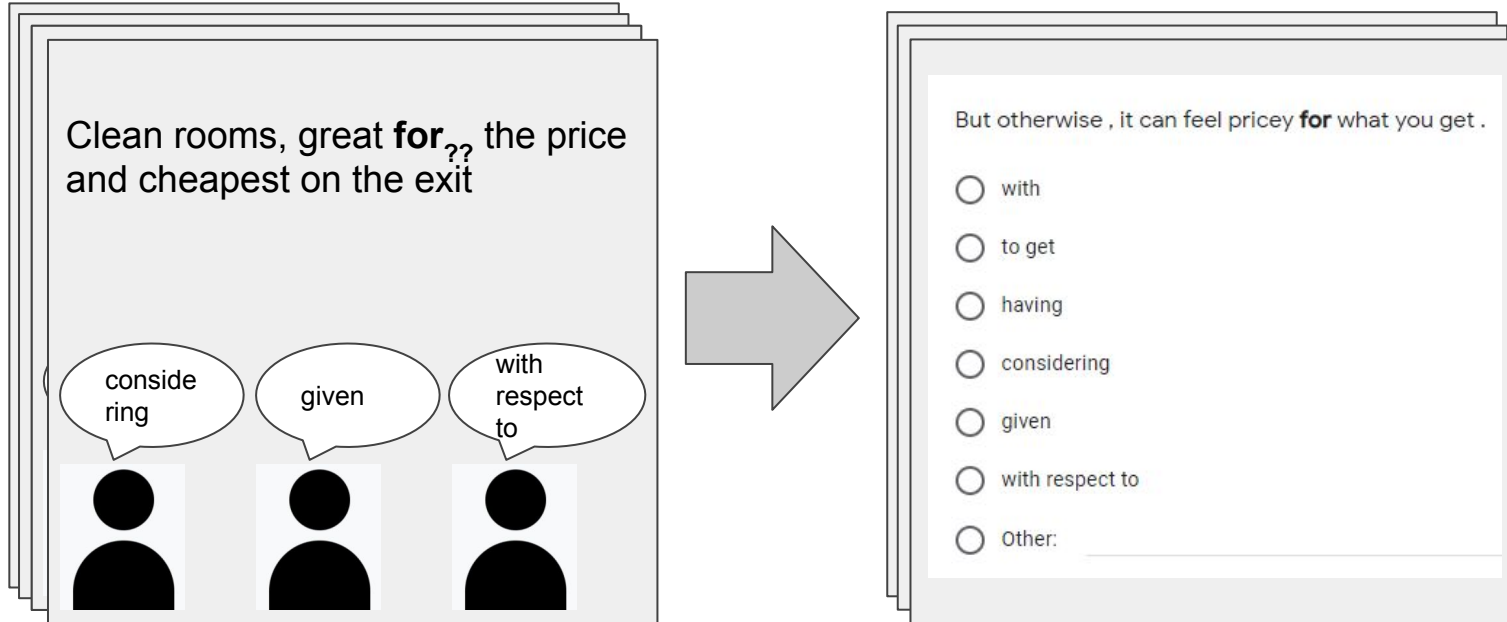

Design 1: Preposition Substitution

Step 1: crowdworkers **generate** substitute phrases

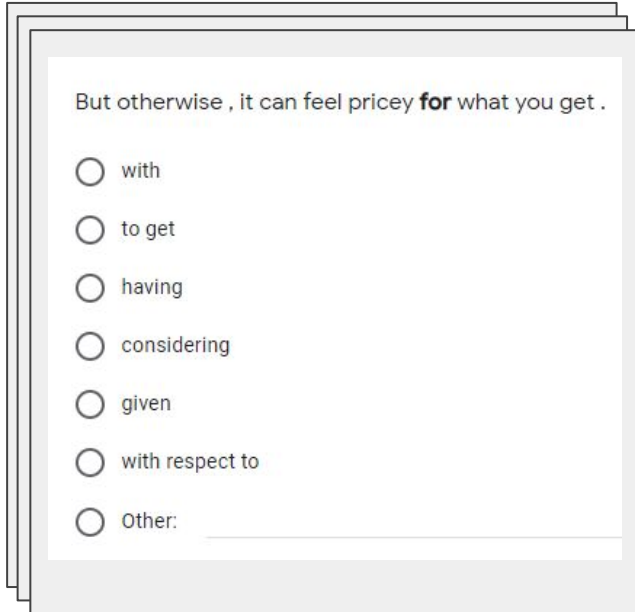

Design 1: Preposition Substitution

Step 2: crowdworkers **select** substitute phrases

Design 1: Preposition Substitution

Step 2: crowdworkers **select** substitute phrases

But otherwise , it can feel pricey **for** what you get .

- with
- to get
- having
- considering
- given
- with respect to
- Other: _____

Design 1: Preposition Substitution

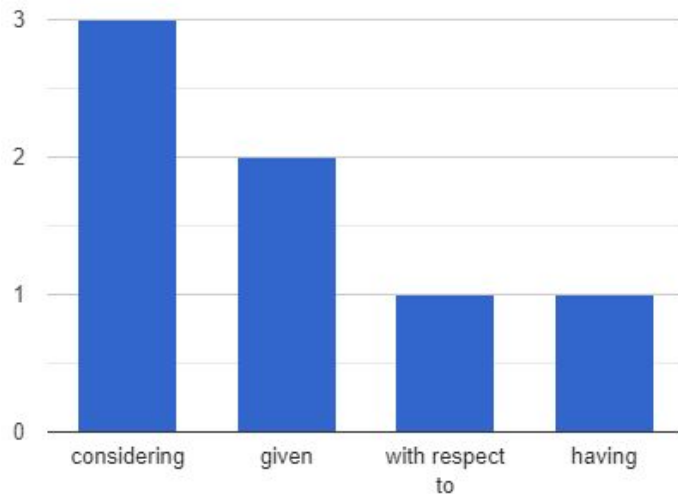

Result: a **distribution across substitutes**, given a **preposition** as used in a **sentence**

But otherwise, it can feel pricey **for** what you get

Design 1: Preposition Substitution

Result: a **distribution across substitutes**, given a **preposition** as used in a **sentence** which we can use for **supersense inference**

But otherwise, it can feel pricey **for** what you get

Design 1: Preposition Substitution

Distributions for **in** aggregated by gold supersenses

Design 1: Preposition Substitution

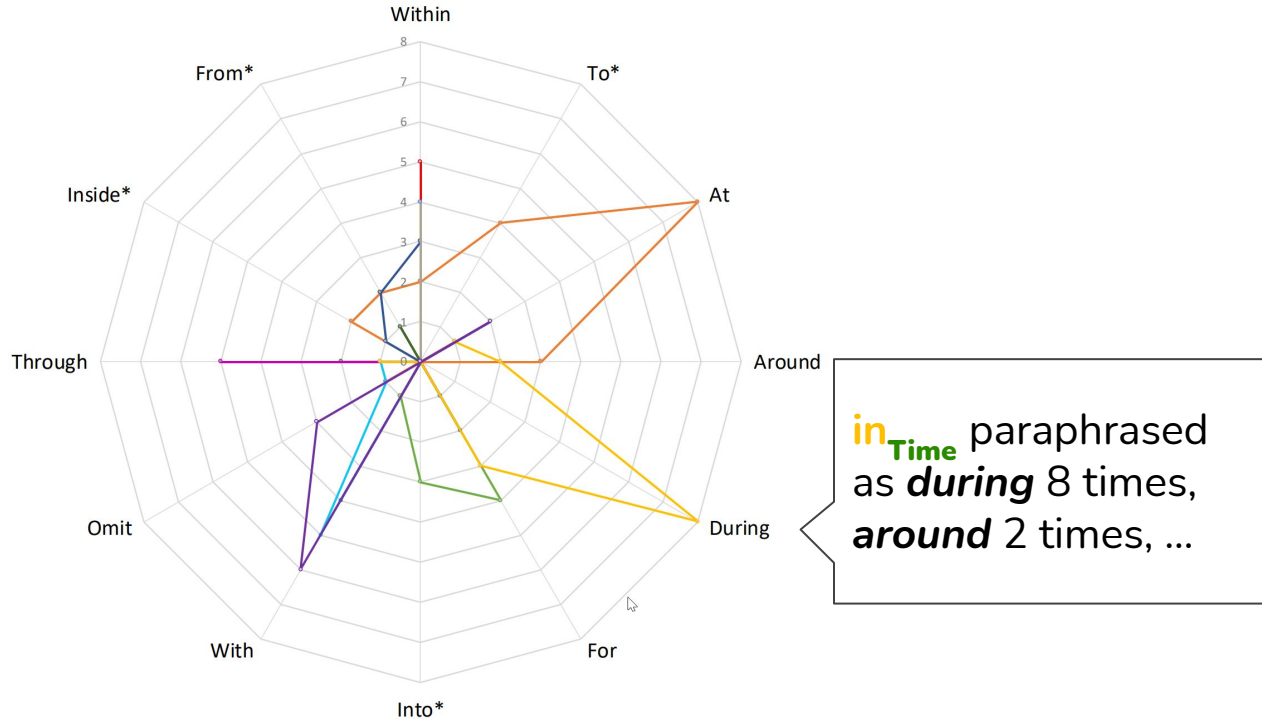

Distributions for **in** aggregated by gold supersenses

in **Locus** paraphrased
as **at** 8 times, **to** 4
times, ...

Design 1: Preposition Substitution

Distributions for **in** aggregated by gold supersenses

Design 2: Neighbor Selection

Step 1: given a **target instance**

I am in_{??} love with a giant plate of nachos!

Design 2: Neighbor Selection

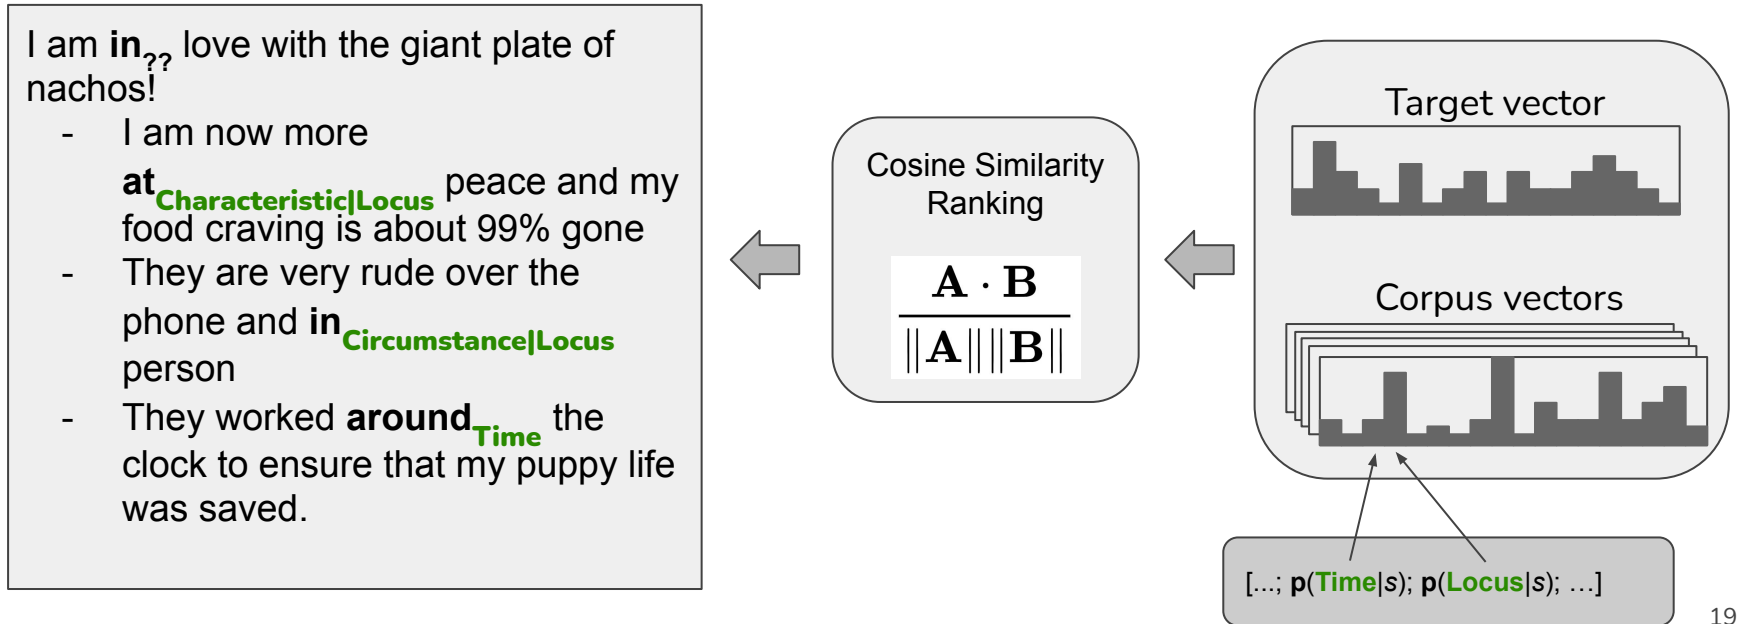

Step 1: given a **target instance**, retrieve **similar instances** from a **gold corpus**

I am **in**_{??} love with the giant plate of nachos!

- I am now more **at**_{Characteristic|Locus} peace and my food craving is about 99% gone
- They are very rude over the phone and **in**_{Circumstance|Locus} person
- They worked **around**_{Time} the clock to ensure that my puppy life was saved.

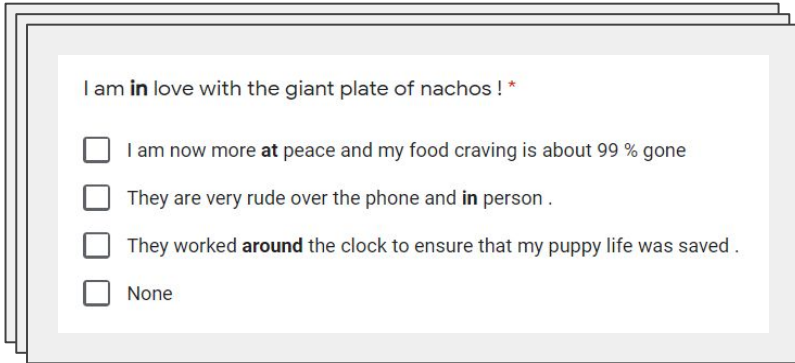

Design 2: Neighbor Selection

Step 1: given a **target instance**, retrieve **similar instances** from a **gold corpus** (by taking **supersense tag probability vectors** for the target instance and gold-tagged instances and ranking them)

Design 2: Neighbor Selection

Step 2: Crowdworkers select an appropriate neighbor, the **majority winner's gold tag** is used for the target instance

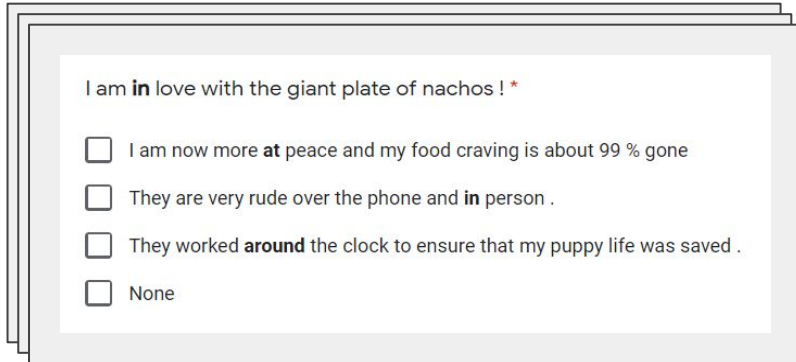

I am **in** love with the giant plate of nachos ! *

- I am now more **at** peace and my food craving is about 99 % gone
- They are very rude over the phone and **in** person .
- They worked **around** the clock to ensure that my puppy life was saved .
- None

Design 2: Neighbor Selection

Step 2: Crowdworkers select an appropriate neighbor, the **majority winner's gold tag** is used for the target instance

I am **in** love with the giant plate of nachos ! *

- I am now more **at** peace and my food craving is about 99 % gone
- They are very rude over the phone and **in** person .
- They worked **around** the clock to ensure that my puppy life was saved .
- None

I am >>in<< love with the giant plate of nachos !

5 responses

- I am **in**?? love with the giant plate of nachos!

Design 2: Neighbor Selection

Step 2: Crowdworkers select an appropriate neighbor, the **majority winner's gold tag** is used for the target instance

I am **in** love with the giant plate of nachos ! *

- I am now more **at** peace and my food craving is about 99 % gone
- They are very rude over the phone and **in** person .
- They worked **around** the clock to ensure that my puppy life was saved .
- None

I am >>in<< love with the giant plate of nachos !

5 responses

- I am **in** **Characteristic|Locus** love with the giant plate of nachos!

Design 2: Neighbor Selection

Two questions

- What if no neighbor has a supersense that matches the target?

I am **in**_{?? (Characteristic|Locus)} love with the giant plate of nachos!

- Again, a great outing for the kids, a frustration for an **out**_{Locus} of town climber
- They are very rude over the phone and **in**_{Circumstance|Locus} person
- They worked **around**_{Time} the clock to ensure that my puppy life was saved.
- None

Design 2: Neighbor Selection

Two questions

- What if no neighbor has a supersense that matches the target?
→ **crowd should select none**

I am **in**_{?? (Characteristic|Locus)} love with the giant plate of nachos!

- Again, a great outing for the kids, a frustration for an **out**_{Locus} of town climber
- They are very rude over the phone and **in**_{Circumstance|Locus} person
- They worked **around**_{Time} the clock to ensure that my puppy life was saved.
- None

Design 2: Neighbor Selection

Two questions

- What if no neighbor has a supersense that matches the target?
→ **crowd should select none**
- Is the quality of the neighbors seriously affected if the predicted tag for the target is wrong?

I am **in**_{Circumstance|Locus} love with the giant plate of nachos!

- I am now more **at**_{Characteristic|Locus} peace and my food craving is about 99% gone
- They are very rude over the phone and **in**_{Circumstance|Locus} person
- They worked **around**_{Time} the clock to ensure that my puppy life was saved.
- None

Design 2: Neighbor Selection

Two questions

- What if no neighbor has a supersense that matches the target?
→ **crowd should select none**
- Is the quality of the neighbors seriously affected if the predicted tag for the target is wrong?
→ **hopefully, a neighbor with the appropriate tag will still be retrieved**

I am **in**_{Circumstance|Locus} love with the giant plate of nachos!

- I am now more **at**_{Characteristic|Locus} peace and my food craving is about 99% gone
- They are very rude over the phone and **in**_{Circumstance|Locus} person
- They worked **around**_{Time} the clock to ensure that my puppy life was saved.
- None

Design 2: Neighbor Selection

Case	Tagger	Crowd	“None”
1 (Tagger correct, gold present)	17/17	17/17	0/17
2 (Tagger incorrect, gold present)	0/12	6/12	5/12
3 (Tagger correct, gold absent)	3/3	0/3	2/3
4 (Tagger incorrect, gold absent)	0/8	0/8	5/8

Pilot study

- 40 instances, 5 workers
- Divide instances for analysis by (1) tag correctness, (2) presence of the target instance’s gold tag among neighbors

Design 2: Neighbor Selection

Case	Tagger	Crowd	“None”
1 (Tagger correct, gold present)	17/17	17/17	0/17
2 (Tagger incorrect, gold present)	0/12	6/12	5/12
3 (Tagger correct, gold absent)	3/3	0/3	2/3
4 (Tagger incorrect, gold absent)	0/8	0/8	5/8

Pilot study

- What if no neighbor has a supersense that matches the target?
→ **crowd often selects none**
- Is the quality of the neighbors seriously affected if the predicted tag for the target is wrong?
→ **appropriate neighbors are still retrieved sometimes**

Conclusion

- Under **ideal conditions**, can we obtain **labels** from **proxy tasks**, by having crowdworkers solve an easy task, and then inferring the labels from their output?
 - Yes!
- Future work
 - **Implementation** on a platform like Amazon Mechanical Turk
 - Different **ranking strategies** for the neighbor selection design
 - Explore **tradeoffs** between the two designs
 - Application to **different annotation tasks**
